

Product Update 5 – December 2011

“Overcoming tight space problems”

Please see attached photos of our new ceiling grid clamp arrangement for:

- Plasterboard ceilings – with furring channel
- Limited space <100mm
- The most stable ceiling grid arrangement available

Ideal for use installing semi recessed heads & plates using our Flexidropper small elbow reducers in

- Residential buildings, with the usual tight void space
- Under ducts and beams etc

Detail:

- Two 38mm clamps with two lugs which clip under the outside rim of the furring channel with bar underneath
- The bar sit directly on top of the furring channel – Very stable – No rocking

Other developments:

- Changing all butterfly wing screws on clamps & brackets to M6 hexagonal /Phillips heads screw
 - Allows using a 10mm ratchet spanner or “Phillips” head drill to tighten screws – also a more secure fixing method
 - Makes it more difficult & reduces temptation for other trades to loosen clamps or rearrange Flexidropper arrangement after installation
