

## PRODUCT UPDATE 6 January 2012

### **New fitting to connect *flexi-dropper*™ hose direct to 25mm pipe**

Attached are photos of our new method of directly connecting a *flexi-dropper*™ hose to a 25mm steel pipe.

We have developed a connection fitting with a standard machined male thread on one end, to go into the *flexi-dropper*™ hose slip nut and the required female thread on the other end to join direct to a 25mm pipe BSP thread.

This new fitting eliminates the need for a 25mm screwed socket to be connected to the pipe, or an elbow on a "hockey stick" to join to the standard male *flexi-dropper*™ nipple.

The adapter will be available for use with both YB28 and YB25 *flexi-dropper*™ models.

We would appreciate any comments or feedback you have on the applications and demand you see for this fitting

When considering ordering for your next project – consider AFT Australia – we can provide the full range of sprinkler heads, alarm valves, butterfly valves, flow switches, pressure switches, pipe and fittings, as well as flexidroppers . We only sell top quality equipment. Contact us for project pricing – we are very competitive.
